Documentation de l'application

Structure des fichiers

Voici la structure des fichiers de votre projet Symfony:

/src

  /Controller

    - AdminController.php

    - AuthController.php

    - CartController.php

    - DefaultController.php

    - HomeController.php

    - ProductController.php

    - RegistrationController.php

    - SecurityController.php

    - ShopController.php

    - UserController.php

  /DataFixtures

    - AppFixtures.php

    - ProductFixtures.php

  /Entity

    - Product.php

    - User.php

  /Form

    - RegistrationFormType.php

  /Repository

- ProductRepository.php

/Security

- Kernel.php

Configuration du fichier services.yaml

Voici la configuration actuelle de votre fichier services.yaml:

```
services:

  _defaults:

    autowire: true

    autoconfigure: true

    public: false

  App\Controller\:

    resource: '../src/Controller'

    tags: ['controller.service_arguments']

  App\Repository\:

    resource: '../../src/Repository'

    autowire: true

    autoconfigure: true

    public: false
```

Entités

Documentation de l'application

Voici un exemple de configuration pour les entités Product et User:

Product.php:

```php
<?php

namespace App\Entity;

use Doctrine\ORM\Mapping as ORM;

/**
 * @ORM\Entity(repositoryClass="App\Repository\ProductRepository")
 */
class Product
{
    /**
     * @ORM\Id
     * @ORM\GeneratedValue
     * @ORM\Column(type="integer")
     */
    private $id;

    /**
     * @ORM\Column(type="string", length=255)
     */
    private $name;
```

```php
    /**
     * @ORM\Column(type="text", nullable=true)
     */
    private $description;

    /**
     * @ORM\Column(type="float")
     */
    private $price;

    /**
     * @ORM\Column(type="integer")
     */
    private $stock;

    /**
     * @ORM\Column(type="boolean")
     */
    private $isFeatured;

    // getters and setters...
}
```
